

Explorer Usability Study Sheet

Purpose

To evaluate how easily a new user can discover and open an existing AR information point created by someone else.

Before Starting

Participant ID: E1 (PG Students)

Location: Academics Area

Prior AR experience: No

Introduction

Thank you for participating. I am testing an AR mobile application that allows users to discover information attached to physical locations. This is a test of the application, not of you. Please think aloud while using it and say what you expect, what seems confusing, and what you are trying to do.

Pre-Task Questions

1. If someone had already added information/story/interesting fact about this place, how would you expect this app to help you find it?

Ans: Easy in finding and reading those information

2. Do you think finding that information will be easy or difficult? Why?

Ans: Easy , if someone had already placed then it should be easy to search and see those information

Explorer Task

Please use the application to discover an existing information point nearby and open its details

Observation Checklist

Yes/No

Understood what explorer mode means: Yes

Understood indoor/outdoor choice: Yes

Understood when to wait before discovery: No

Understood readiness/localization messages: Yes after taking some time

Noticed the anchor correctly: Yes

Could navigate toward / identify it: Yes

Could tap/select it successfully: Yes

Could read/open details successfully: Yes

Needed moderator help: No

Where did difficulty occur?

Before the earth gets ready, she started searching and then by seeing the message of earth tracking not ready waited and then used correctly

Notable hesitation/confusion:

Task result: Success

Post-Task Questions:

1. How easy or difficult was it to find the information point?

Ans: Very easy

2. What part was most confusing?

Ans: Everything was clear and understood

3. Did the experience match what you expected?

Ans: Yess it matched

4. What would improve the discovery experience?

Ans: I want to see the photos of that place also

Quick Rating

Rate 1–5:

5: Very Satisfied, 1: Very Dissatisfied)

The explorer workflow was easy to understand: 5

Finding the information point was easy: 4

Opening and reading the details was easy: 5

The feedback messages were clear: 4

I would feel confident doing this again: 5

The information point appeared at a believable physical location: 3.5

It was easy to notice where the information point was located: 4

Researcher Summary After Session

Main issue:

At first before reading those started searching for the anchors

Main positive point:

Once found, was doing everything smoothly

Suggested improvement:

If you can add photos also of those locations
