

Explorer Usability Study Sheet

Purpose

To evaluate how easily a new user can discover and open an existing AR information point created by someone else.

Before Starting

Participant ID: E2 (RA - Research Associate)

Location: Academics Area

Prior AR experience: No

Introduction

Thank you for participating. I am testing an AR mobile application that allows users to discover information attached to physical locations. This is a test of the application, not of you. Please think aloud while using it and say what you expect, what seems confusing, and what you are trying to do...

Pre-Task Questions

1. If someone had already added information/story/interesting fact about this place, how would you expect this app to help you find it?

Ans: By opening the app and seeing those information like a list

2. Do you think finding that information will be easy or difficult? Why?

Ans: Easy, just like to read a list of informations

Explorer Task

Please use the application to discover an existing information point nearby and open its details

Observation Checklist

Yes/No

Understood what explorer mode means: Yes

Understood indoor/outdoor choice: Yes

Understood when to wait before discovery: No

Understood readiness/localization messages: No

Noticed the anchor correctly: Yes

Could navigate toward / identify it: Yes

Could tap/select it successfully: Yes

Could read/open details successfully: Yes

Needed moderator help: No

Where did difficulty occur?

At first just after the camera opens, didn't understood what to search for, though i have made clear what is the role of explorer

Notable hesitation/confusion:

Starting

Task result: Success

Post-Task Questions:

1. How easy or difficult was it to find the information point?

Ans: Interface was easy but as i was not how AR works so took some time to understand

2. What part was most confusing?

Ans: Nothing after knowing how it behaves

3. Did the experience match what you expected?

Ans: No, i expected it to be a cluttered app full of informations (which i won't read) and all but turns out interesting

4. What would improve the discovery experience?

Ans: A big big pins or 3D robot or objects instead of pins

Quick Rating

Rate 1–5:

5: Very Satisfied, 1: Very Dissatisfied)

The explorer workflow was easy to understand: 4

Finding the information point was easy: 4

Opening and reading the details was easy: 4

The feedback messages were clear: 5

I would feel confident doing this again: 4

The information point appeared at a believable physical location: 4

It was easy to notice where the information point was located: 3

Researcher Summary After Session

Main issue:

Saw the first pin and then stayed at same location searching every corners without moving

Main positive point:

Easily tapped and found the information interesting

Suggested improvement:

Different 3D objects
