

Explorer Usability Study Sheet

Purpose

To evaluate how easily a new user can discover and open an existing AR information point created by someone else.

Before Starting

Participant ID: E3 (PG Students)

Location: Academics Area

Prior AR experience: Yes (used Lenskart and Amazon AR things)

Introduction

Thank you for participating. I am testing an AR mobile application that allows users to discover information attached to physical locations. This is a test of the application, not of you. Please think aloud while using it and say what you expect, what seems confusing, and what you are trying to do.

Pre-Task Questions

1. If someone had already added information/story/interesting fact about this place, how would you expect this app to help you find it?

Ans: Gives/show me information about specific places with use of AR

2. Do you think finding that information will be easy or difficult? Why?

Ans: Difficult because in google maps also its difficult to find/navigate to any place

Explorer Task

Please use the application to discover an existing information point nearby and open its details

Observation Checklist

Yes/No

Understood what explorer mode means: Yes

Understood indoor/outdoor choice: Yes

Understood when to wait before discovery: Yes

Understood readiness/localization messages: Yes

Noticed the anchor correctly: Yes

Could navigate toward / identify it: Yes

Could tap/select it successfully: Yes

Could read/open details successfully: Yes

Needed moderator help: No

Where did difficulty occur?

Nowhere, did everything smoothly

Notable hesitation/confusion:

Nothing

Task result: Success

Post-Task Questions:

1. How easy or difficult was it to find the information point?

Ans: It was easy as the interface made everything clear, like when to wait when to see and all

2. What part was most confusing?

Ans: Interface it was good so no confusion

3. Did the experience match what you expected?

Ans: Yes it did

4. What would improve the discovery experience?

Ans: Accuracy if possible but i know its hard to do so

Quick Rating

Rate 1–5:

5: Very Satisfied, 1: Very Dissatisfied)

The explorer workflow was easy to understand: 5

Finding the information point was easy: 5

Opening and reading the details was easy: 5

The feedback messages were clear: 4

I would feel confident doing this again: 5

The information point appeared at a believable physical location: 4

It was easy to notice where the information point was located: 4

Researcher Summary After Session

Main issue:

Nothing , used everything perfectly

Main positive point:

Was quick and understood everything easily

Suggested improvement:

Accuracy
