

Explorer Usability Study Sheet

Purpose

To evaluate how easily a new user can discover and open an existing AR information point created by someone else.

Before Starting

Participant ID: E5 (PG Students)

Location: Hall Residential Area

Prior AR experience: No

Introduction

Thank you for participating. I am testing an AR mobile application that allows users to discover information attached to physical locations. This is a test of the application, not of you. Please think aloud while using it and say what you expect, what seems confusing, and what you are trying to do.

Pre-Task Questions

1. If someone had already added information/story/interesting fact about this place, how would you expect this app to help you find it?

Ans: Help me to find where those information are placed and search for it

2. Do you think finding that information will be easy or difficult? Why?

Ans: Easy because it may be a list of information where you can see informations about all the places nearby

Explorer Task

“Please use the application to discover an existing information point nearby and open its details”

Observation Checklist

Yes/No

Understood what explorer mode means: Yes

Understood indoor/outdoor choice: Yes

Understood when to wait before discovery: Yes

Understood readiness/localization messages: Took some time but eventually did

Noticed the anchor correctly: Yes

Could navigate toward / identify it: Yes

Could tap/select it successfully: Yes

Could read/open details successfully: Yes

Needed moderator help: Yes

Where did difficulty occur?

At first because wasn't expecting the camera just after clicking on outdoor

Notable hesitation/confusion:

Once when she discovered the pins, took some time to click on that to see

Task result: Success

Post-Task Questions:

1. How easy or difficult was it to find the information point?

Ans: Very easy

2. What part was most confusing?

Ans: I got confused when i first successfully found the first pin and then when i saw the text on top " Tap on pin to see the details" I got clear

3. Did the experience match what you expected?

Ans: No I thought it would be cluttered screen full of information

4. What would improve the discovery experience?

Ans: Want to add photos and of places to show how this place used to be a years/decades ago

Quick Rating

Rate 1–5:

5: Very Satisfied, 1: Very Dissatisfied)

The explorer workflow was easy to understand: 5

Finding the information point was easy: 5

Opening and reading the details was easy: 5

The feedback messages were clear: 5

I would feel confident doing this again: 5

The information point appeared at a believable physical location: 4

It was easy to notice where the information point was located: 5

Researcher Summary After Session

Main issue:

Took some time to analyse what to do after seeing the pin but the message on top helped to tap and see the details

Main positive point:

Feedback messages was quite useful

Suggested improvement:

Its good that anytime we are at some historical places we have to look at boards/brochures or ask people about those but this is like a game and easy to use and is very informative if used wisely but improvements make the interface more charming or attractive
